

# Number Roll and Write

Materials: number cube, graph paper, crayon

1. Player rolls the number cube and writes that number in the first box above that number on the graph.
2. Player rolls the number cube again and records that number on the graph.
3. Player continues to do this until one number reaches the top. Then, the player colors in that column and writes the number 1 at the top because it was the first number to make it to the top.
4. Player continues to roll and write until there is a 2<sup>nd</sup> number that goes to the top. Then, that column is colored in and a 2 is written at the top of the column, indicating that number was the 2<sup>nd</sup> number to make it to the top.
5. The game can continue until all numbers reach the top.

\* This is a one player game that can easily be adapted to a 2 player game by having 2 players take turns.
